

ICT Project – Bootstrap 4

Directions:

1. Since March is declared the official observation of Fire Prevention Month, create a website that provides awareness and education about preventing fire accidents.
2. Your website should include the following:
 - a. *Tables*
 - b. *Images*
 - c. *Forms*
 - d. *Hyperlinks*
 - e. *Navigation Bar*
 - f. *Buttons*
 - g. *Text*
3. Use hyperlinks to connect your webpages.
4. Save the HTML file with the filename:
CAMPUS_ICTGr&Sec_Project_Lastname.html
5. Upload to GitHub Pages.
6. Submit the repository and website link in the submission bin.

Sample Output:

<https://undercovered777.github.io/project3rdqtr/>

Website View

The website features a navigation bar at the top with links to Home Safety, About Us, and Contact Us. The main content area has a yellow header card: "A fire can happen anywhere and it's important to always be prepared for what you would do if you had one in your home. Likewise, it's just as important to look at all of the ways that you can prevent one from happening in the first place. You want to know how to prevent fire in your home to protect it and the ones you love. Of course, there are the more obvious things that you can buy to protect your home against fire, such as smoke alarms, fire extinguishers, having an escape plan and even fireproof safe deposit boxes to protect your valuables." Below this is a grid of cards with tips:

- How to Prevent Fire**: Excess electricity flowing through items in your home can always be a potential fire hazard. Things like computers, TVs, game systems and a whole lot more use electricity even when they're not on. That means they can always experience a surge or they can just overheat and cause a fire. The continuous electricity that's flowing into them can cause a fire as well. By unplugging these items when you're not using them and, therefore, not paying attention to them, you can cut down on your chances of a fire.
- Unplug Items You're Not Using**: At the very least, you want to make sure that all of your electronics are plugged into surge protectors. A surge in power is when you're more likely to experience an electrical fire and by plugging items into a surge protector you don't have to worry about that excess electricity getting to the item and causing a fire. The longer you leave items that aren't in use, the more likely you are to have a fire in the first place or the strength of it if you do have a fire.
- Keep Heat Sources Away From Heat-Generators**: If you have items like fabrics, paper, and even hair that could catch fire, keep them away from heat-generators. You want to keep your hair and your clothes out of the way when you're starting a fire in your fireplace. You want to keep the stack of papers away from your wax warmer. You also want to make sure that you're watching closely for anything that could turn into a problem. You don't want a fire to pop up anywhere and that means watching heat sources and anything close to them.
- Keep Flammable Items Away From Heat**: Flammable items like fabrics, paper, and even hair should be kept away from excess heat or flame. You want to keep your hair and your clothes out of the way when you're starting a fire in your fireplace. You want to keep the stack of papers away from your wax warmer. You also want to make sure that you're watching closely for anything that could turn into a problem. You don't want a fire to pop up anywhere and that means watching heat sources and anything close to them.
- Don't Smoke in the Kitchen**: If you're smoking, you want to make sure that you've put the cigarette out before you leave the room. Before you go to sleep, make sure that the cigarette is out and won't burn the rest of the room down. If you think that you've put it out, that flame can then continue to burn or cause you to burn down outside, watching out for stray ashes and you make sure to put the cigarette out entirely before throwing it away, you can turn down on this risk.

At the bottom, there's a "Follow Us on Social Media" section and a contact form titled "Contact Our Experts" with fields for name, email, contact number, and message, along with "Send" and "Clear" buttons.

Mobile View

The mobile view shows the same content as the desktop version, including the yellow header card and the five prevention tips cards. The navigation bar at the top includes "Home Safety", "About Us", and "Contact Us". The footer at the bottom includes "Follow Us on Social Media" and a "Contact Our Experts" form.

Fire Prevention Tips

Visual	Tip	Explanation
	Enforce a "No Smoking" rule both inside and outside the home	One of the leading causes of fire-related fatalities is smoking and cigarette-related fires. These fires frequently start when cigarettes, ashes, or matches are inappropriately dumped and ignite mattresses, bedding, upholstered furniture, or rubbish. You can keep your home and family safe by being aware of what makes smoking fires so dangerous and what you can do to help prevent them.
	Unplug all electrical equipment when not in use	You may be able to reduce your expenses by unplugging gadgets, and this action will also prolong the life of your possessions. The more things you have plugged in around the house, the more likely it is that a power surge or fire would cause damage.
	Keep flammable items out of children's reach and open heat	Candles, lighters, and matches are examples of flammable products that need to be stored safely and securely. Extremely flammable substances should be handled, transported, and stored safely to lower the risk of fire and the possibility that they will spark an existing fire.

What is this website for?

In the Philippines, March is designated as Fire Prevention Month, making it the ideal time to talk about and spread knowledge of the causes, risks, and dangers of fire. The Philippines has been frequent with fire accidents. This is why we established this website. A fire prevention strategy can assist prevent a fire from starting in the first place and considerably limit the amount of damage that a fire may do. A fire emergency evacuation plan outlines how you and your personnel can leave the building in a safe and suitable way from any location.

This website will provide important tips to prevent fire in homes, workplaces, schools, etc.

	E = 6	AS = 5	S = 4	NI = 2	P = 1
Execution of Instructions	Executed the instructions efficiently. Followed the procedures accurately.	Followed most of the instructions. One instruction is skipped; however, it does not affect the over-all output.	The activity shows the basic CSS Design. There are two to three errors in the activity.	The activity is missing important contents due to omission of four to five instructions.	The activity is full of technical errors due to misinterpretation of all instructions.
Format / Layout	All the contents are organized and presented in a uniform format with distinctions between major contents and supporting details.	Most contents are organized and well presented. Formatting where necessary is applied. However, one formatting requirement is missing.	The major contents are formatted; however, two to three formatting requirements are missing.	The activity contains formatting; however, four to five formatting requirements are missing.	The activity was laid out poorly. Contents are not placed in proper order. All formatting requirements are missing.

Accomplished task within the time limit.	The activity was completed before the allotted time elapsed.	The activity was completed within the given time.	The activity was not completed within the given time. A five-minute extension was given in order to complete the activity.	The activity was not completed within the given time. A ten-minute extension was given in order to complete the activity.	The activity was not completed within the given time. A fifteen-minute extension was given in order to complete the activity.
Creativity / Originality	Exercises creativity. Design goes above and beyond the requirement.	Applies original design in most aspect of the activity.	The activity is presented with some unique design details.	Lacks originality. Design is a duplicate of the sample.	Failed to create even the simplest design for the activity.
General Output	Pre-planning and proper execution is very evident. All requirements for the activities are evident in the final output.	The activity contains one minimal inaccuracy is observed; however, it did not affect the over-all output.	Two to three major components of the activity are missing.	The activity is very simple and lacks effort in most areas. Four to five components of the activity are missing.	The activity has no impact at all. All major components of the activity are missing.
